

VILLAGE OF CHAGRIN FALLS
East Washington Street
Improvement Project Meeting
*When: **June 4, 2020 at 7:00 PM***
*Via **ZOOM** – see details on back*

A public meeting will be held on Thursday, June 4, 2020 at 7:00 PM via the Zoom teleconferencing platform to discuss planned infrastructure improvements along E. Washington Street including sanitary sewer rehabilitation, a redundant watermain abandonment, and pavement resurfacing. The project is funded by low interest loans from the Ohio EPA and a grant from the Ohio Public Works Commission. Construction is scheduled to begin in June, 2020 and be completed prior to the end of the year.

The current plan is to rehabilitate the 112-year old sanitary sewer main by installing a cured-in-place pipe (CIPP) liner, repairing manholes, lining and/or replacing laterals within the public Right-of-Way (R/W) and installing cleanouts (a riser pipe that allows access for cleaning of the line from ground level) near the sidewalk. CIPP is a trenchless technology that inserts an epoxy liner inside the pipe which is heat cured under pressure to harden and conform to the shape of the pipe. The limits of the sanitary sewer rehabilitation extends from Pleasant Alley (behind Key Bank) to 540 E. Washington Street (Panini's).

While the Ohio Revised Code specifies that maintenance of connecting laterals to the main sewer are the responsibility of private property owners, the Village has typically funded rehabilitation of laterals within the Right-Of-Way. The remaining lateral (typically from the back of sidewalk to the house or building) is the responsibility of the property owner. The Village is undertaking significant testing of the sanitary sewer line before and after construction to gage effectiveness in reducing stormwater leakage into the system and will extend pre-construction investigations into laterals on private property. The Village will extend internal lateral televising as far as practical or to the front wall of each house/building to locate and observe the general condition, alignment and structural integrity of the pipe. For those private laterals found to be suitable for cured-in place pipe lining, the Village will offer property owners the opportunity to have their laterals lined as part of the project by extending bid prices to owners. The property owner would benefit by improving the structural integrity of the aged clay pipe lateral by sealing joints to prevent loss of soil through joints, reducing root intrusion, and improving the waste carrying ability of the lateral by smoothing joints and cracks with a continuous slick liner. Typical residential lateral lengths are about 50-feet and the bid price for lining is \$22 per foot, so a typical lateral liner would cost \$1,100 depending on building setback footage. Participation in this program is voluntary but highly recommended.

Once pre-construction lateral televising is complete, you will be notified if your lateral is suitable for lining and you will receive a participation agreement for consideration.

If you cannot attend the meeting, questions or comments can be sent to the Village of Chagrin Falls at any of the contact points below. Your understanding and input are important and we look forward to hearing from you.

Sincerely yours,

Robert Jamieson, Chief Administrative Officer

Timothy Lannon, Village Engineer
